Kevin Patel

Surat, Gujarat, India | +91 88492 78804 | kdonpatel91@gmail.com

Professional Summary

Results-driven Full Stack Developer with 6+ years of experience engineering high-performance web applications and distributed backend systems using React.js, Next.js, Node.js, GoLang, and Python. Proven track record of boosting system performance by up to 35%, accelerating sprint delivery velocity, and executing complex monolithic-to-microservices migrations. Expert in relational and NoSQL database optimization (PostgreSQL, MySQL, MongoDB), secure RESTful API design, and cloud deployments (AWS, Azure, GCP). Skilled in leveraging AI tools like GitHub Copilot to optimize development workflows and deliver scalable, maintainable enterprise software solutions.

Technical Skills

- Languages: JavaScript (ES6+), TypeScript, Python, GoLang
- Frontend Technologies: React.js, Next.js, Tailwind CSS
- Backend & Databases: Node.js, Python, FastAPI, PostgreSQL, MySQL, MongoDB, Redis
- Cloud & DevOps: Azure, AWS, GCP, Docker, Kubernetes, GitHub Actions, Vercel, Netlify
- Tools & Architecture: REST APIs, Git, GitHub, GitLab, Postman, Microservices, BeautifulSoup, Selenium, Scrapy, Playwright
- Emerging Tech & AI: GitHub Copilot, LLM Integrations, Go (Golang), React Native, Flutter

Professional Experience

Web2Market | Austin, Texas **Full Stack Developer** Aug **2022 - Present**

- Architected and engineered 15+ scalable, reusable React/Next.js components, establishing design system standards that accelerated feature delivery lifecycles by 25% across cross-functional teams.
- Spearheaded web performance optimization initiatives using code splitting, dynamic imports, and lazy loading, driving a 35% improvement in Core Web Vitals and page load metrics.
- Designed, built, and maintained high-availability microservices in Python and Node.js, maintaining 99.9% uptime while seamlessly handling scaling demands for expanding web traffic.
- Led the complete migration of legacy PHP monoliths into modern, decoupled RESTful APIs and Node.js microservices, reducing tech debt and enhancing system maintainability.
- Implemented secure third-party API integrations and OAuth2/JWT authentication workflows, safeguarding sensitive user data across multi-tenant applications.
- Championed Agile best practices and AI-assisted coding methodologies (GitHub Copilot), increasing overall sprint feature delivery velocity by 20%.
- Integrated LLM capabilities and automated AI-driven workflows into enterprise web applications, enhancing feature responsiveness and improving overall end-user experience by 25%.

Waterways Leisure | Mumbai, Maharashtra **Full Stack Developer** Jan **2020** - Aug **2022**

- Directed end-to-end full-stack development for enterprise-grade applications, seamlessly pairing React.js interfaces with scalable Node.js and Python microservices.
- Engineered robust RESTful APIs with fine-grained RBAC (Role-Based Access Control) authentication, lowering unauthorized access vulnerabilities to zero.
- Optimized complex database queries and indexing strategies across PostgreSQL, MySQL, and MongoDB, cutting average API latency by 40%.
- Mentored junior engineers through rigorous code reviews and pair programming, elevating team code quality, test coverage, and deployment reliability.

Webiots | Surat, Gujarat **Full Stack Developer** Jan **2019** - Jan **2020**

- Developed automated internal data-processing pipelines and real-time analytics reporting tools, improving internal team operational efficiency by 30%.
- Built and integrated dynamic, mobile-responsive UI components with backend APIs using React and JavaScript, significantly enhancing end-user engagement.
- Collaborated with cross-functional engineering teams to design, test, and ship reliable full-stack applications adhering to strict deadlines.

Projects

Cordelia Cruises (Next.js, Node.js, Express, Postgresql) | **Full Stack Developer**

- Architected and developed a full-featured cruise ticket booking platform enabling users to explore cruises, itineraries, and exclusive offers.
- Engineered web-checkin, rescheduling, and cancellation workflows to enhance customer self-service capabilities and operational efficiency.

Jainism Course Platform (React.js, Python, MongoDB, React-Native) | **Full Stack Developer**

- Built a religious educational platform supporting online and offline course purchases, complete with chapter navigation and interactive quizzes.
- Integrated payment gateways and designed responsive user interfaces to deliver a seamless learning and checkout experience.

Education

Bachelor's in Computer Engineering | J.H.D.P Palsana - Surat, Gujarat Aug **2016** - Jul **2019**
